To Whom It May Concern:

The following is by way of offering a letter of reference for Care Research LLC. And Colorado Histo-Prep.

Our company enlisted the support of Mr. Bawa and his companies and support staff to conduct an animal study for a project we were working on in preparation for submitting a 510K to the FDA. All employees and ownership personnel were excellent in the performance of their duties, and went well beyond our expectations to ensure the work was performed at the highest level.

The facilities are very well equipped, and the professionalism of the veterinarian as well as other employees directly involved in the actual process was impressive. Dr. Bawa went well out of his way to secure the correct animals for the study, and help with creating and modifying the protocol to ensure the process was as expected by the FDA, and the results were reported in an understandable and scientific manner.

Our company submitted the study to the FDA, and the FDA came back to us asking for additional detailed information. The FDA requested detailed semi-quantitative histopathology (with H&E and Masson's Trichrome) and accompanying photographs which was not part of the original study requirements. This additional work was conducted at Colorado Histo-Prep and submitted to the FDA. They accepted the results without question.

In short, I take great pleasure in recommending the above mentioned companies to conduct any research and/or testing you feel necessary to help complete whatever project you may undertake.

Yours truly,

Don Blacklock, President
